Final

Your final is to create a website using HTML, CSS + JavaScript. It must contain at least three layers of file parenting, clean + heavily commented code, thoughtful + appealing design and a title. You can use any JS library.

You will create a concept + wireframe(s) for the different layout of your pages. You must create a webpage that acts as a project proposal slide deck - explains your site + includes relevant details. Create a **3 slide only** deck for your + host it on your class site.

3 slide project proposal presentations + user testing will be **Monday November 30**. In breakout rooms you will present and user test your project with your classmates. Everyone must participate, giving + receiving feedback.

Your Final Must be a **CONTEMPORARY** Web Page. This means responsive and using semantic HTML 5. I am not setting a page # requirement, but will be looking for evidence that you put effort into making the most technically + aesthetically sophisticated project you can.

Original Content - no memes!
This should be a portfolio piece you can refer to after you graduate to showcase both your design + technical abilities (image-making is also a skill).

A solid concept / idea
HTML5 structure with CSS styling
CSS - use of classes and IDs
Responsive CSS Layout (responsive, flex or grid or Bootstrap)
JavaScript Interactivity
Thoughtful + Appealing Design
Posted to Your github Server

Final

Project Pitches + User Testing in Breakout rooms:
Monday November 30 + Thursday December 3

Final Critique + Feedback in main room: **Monday December 7**

Final Project Sites will be due upload and posted on the class wiki :**Sunday December 13 @ 11:59 pm**
